About myself

I have been working in design since 2009, creating layouts for newspapers and books. Since 2011, I have been involved in commercial design, working in publishing houses and printing companies. Since 2014, I have been focusing on digital product design, layout, and frontend development. In teams, I represent two competencies: designer and frontend developer.

Design

Prototyping interfaces based on hypotheses and user experience analysis. Generating hypotheses based on user data from analytics services. Designing interaction scenarios between users and the product. Creating and maintaining a component library and design tokens as part of the design system. Writing interface texts in an informative style, aligned with the product's tone of voice.

Designer competency matrix

Personal skills assessment

Frontend

Development and maintenance of: product interfaces, client-side logic, API interactions, component libraries, and npm packages.

Personal skills assessment

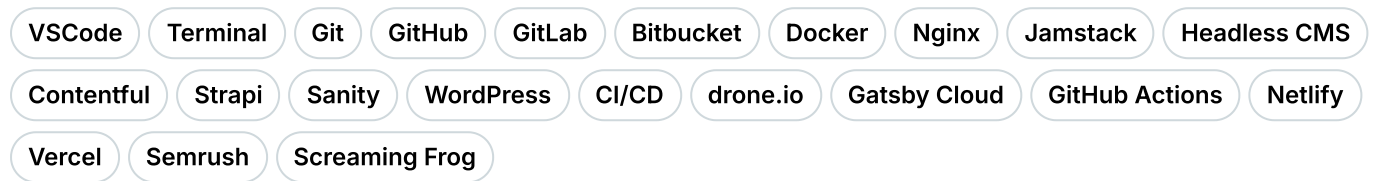

Markup development

HTML5, semantic markup, CSS, Less, SCSS, PostCSS, TailwindCSS. BEM, Mobile-first, responsive and cross-browser layout. Basic animation.

[HTML](#)[CSS](#)[Less](#)[SCSS](#)[PostCSS](#)[TailwindCSS](#)[Framer Motion](#)[Flexbox](#)[Grid](#)[Animations](#)

Development

Working with Jamstack. Setting up and integrating a Headless CMS into the project. Configuring infrastructure for local development and deploying the project on a VPS in Docker. Setting up internal and external routing, including SSL. Configuring CI/CD and building the project. SEO analysis and project optimization.

My career

Studio 15

December 2024 – Now, 6 months

Frontend development team lead

Organization of the frontend development team's work. Development and maintenance of a project for an agricultural holding.

- Handled operational tasks: creating, assigning, and prioritizing tasks for the frontend development team.
- Conducted task reviews and deployments for the team.
- Made architectural and technology stack decisions for projects.
- Created a CMS and website for an agricultural holding.
- Migrated the CMS project from Next 14 Pages Router to Next 15 App Router, and from Redux to Zustand. Implemented SSR, "use client," and server-side data fetching.
- Improved the CMS project's linter. Introduced Prettier and automated code style enforcement. Integrated packages for collaboration: simple-git-hooks, lint-staged, and commitlint.
- Designed the CMS interface without a design file, considering component libraries. Assisted the team in interface planning.
- Refined critical modules (authentication, etc.) and launched the CMS project.
- Built the agricultural holding's website from scratch using technologies new to the team.
- Implemented Tailwind for layout and Framer Motion for animated sections on the website.
- Created a component base for the agricultural holding's website.
- Applied the PixelPerfect principle to the agricultural holding's website.

JavaScript React React Hooks Redux Zustand Next SSR TypeScript Axios
Jest HTML CSS SCSS TailwindCSS Flexbox Grid Animations Framer Motion
NodeJS ESLint Prettier Npm Webpack VSCode Terminal Git Docker Nginx

Designer

Support of internal and client projects.

- Reviewed designs from contractors.
- Refined designs within the team during the development process.

Figma

Reason for leaving:

Project completion. Work on the CMS and the website for the agricultural holding was finished.

Open source

May 2024 – December 2024, 7 months

Frontend developer

Development and maintenance of your own npm packages and projects.

- Created and published the npm package [Tailwind Dictionary](#) for converting design tokens into a Tailwind theme.
- Created and published the npm package [Mixin Dictionary](#) for converting design tokens into Less or SCSS mixins.
- Refined and published the npm package [pbstyles](#), a style library for rapid prototyping.
- Created and published the npm package [pbcomponents](#), a component library for rapid prototyping.

Designer

Development and maintenance of your own projects.

- Refined the pbstyles style library, created a presentation, and published it on [Figma Community](#) and [Behance](#).
- Refined the pbcomponents component library, created a presentation, and published it on [Figma Community](#) and [Behance](#).

Figma

Notion

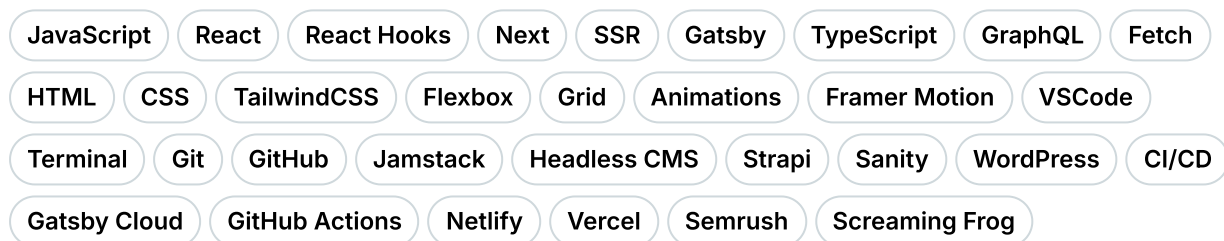

pixelpoint.io

April 2023 – May 2024, a year

Frontend developer

Development and support of projects.

- Participated in the development of 9 client projects.
- Created PixelPerfect pages and sections for websites based on ready-made designs with content managed via Headless CMS.
- Developed interactive sections with animations and logic integrated with other services.
- Enhanced the component base of the projects.
- Actively used SSR, “use client” and server-side data fetching.
- Optimized performance and loading of new and existing pages and modules.
- Reviewed tasks from other developers. Ensured accessibility, quality, and SEO analysis on the projects.
- Implemented and maintained multilingual functionality of the projects.

Reason for leaving:

Difficulties working with a foreign company from Russia.

ipgate.io

October 2022 – March 2023, 5 months

Frontend developer

Improvement of the client side for project launch. Project maintenance and refactoring.

- Fixed critical bugs after the project’s beta testing.
- Refined core modules for the full launch of the project: authentication, ordering, pricing, etc.
- Handled refactoring and improvement of the project’s component base.
- Created informational pages for the project.
- Implemented and maintained the multilingual functionality of the project.

— Migrated the project from Quasar to Nuxt and carried out a redesign.

Project completion. Work on the product was finished.

sellmonitor.com

December 2021 – September 2022, 9 months

Frontend developer

Product interface development.

- Participated in the development and maintenance of the product.
- Handled refactoring and improvement of the project's component base.
- Created a separate large module for analytics of sellers' data from API-sourced marketplace data.
- Maintained the multilingual functionality of the project.

reg.ru

October 2018 – December 2021, 3 years

Designer

Support and development of the domain area and other parts of the service.
Designing internal projects.

- Created an internal project for HR and company employees.
- Participated as a designer in the domain development team.
- Contributed to the company's design system as part of the design team.
- Participated in a working group on the implementation of design tokens and a unified component library.
